SKILLS (Years of experience listed after each item)

Programming Languages: Python 5, JavaScript 4, PHP 2

Frameworks: Flask 4, Node.js 3, Express.js 3, Laravel 2,

Databases: PostgreSQL 2, MongoDB 0.5, MySQL 2

CMS's: Kirby 2, Drupal 1, WordPress 2, ButterCMS 1

Other: Git 5, Docker 0.5, Agile 3, Redux.js 2, AWS 2, Ubuntu 1.5, Nginx 1, Zapier 1, Klaviyo 1

WORK EXPERIENCE

[IV Interactive](#)

Remote

Backend Engineer II

Sep 2024 – Present

- Developed and maintained backend systems using **PHP** and **Laravel**, supporting data-driven features, **CMS integrations (Kirby 3, ButterCMS, WordPress)**, and scalable content workflows.
- Assisted in website updates and maintenance on **Ubuntu**, implementing backend fixes and supporting performance tuning and issue resolution using **Nginx**.
- Collaborated in an **Agile delivery environment** to deploy updates, resolve backend issues, and improve analytics accuracy using **GA4** and **GTM**.
- Applied **HIPAA-aware data handling** practices across RCA healthcare sites, ensuring compliance, access controls, and safe content workflow.
- Created Docker-based local development environments** for **Kirby 3** and **Kirby 2**, standardizing builds and reducing environment-related issues.

Remote

Backend Developer

March 2023 – July - 2024

- Contributed to backend-driven content and data workflows using **WordPress** and **Drupal 9**, supporting secure data handling, system updates, and maintainable enterprise **CMS integrations**.
- Developed and maintained **Python-based backend services and RESTful APIs**, supporting secure data access and modernization of enterprise systems.
- Investigated and debugged backend defects and test failures in collaboration with an **Agile (Scrum) team**, contributing to **CI/CD pipelines** and automated testing workflows.
- Assisted with **backend deployments**, helping validate builds and monitor application behavior after release.

[Revent](#)

Washington, DC

Junior Backend Engineer

February 2022 – Dec - 2022

- Developed **RESTful backend APIs** using **Node.js**, **TypeScript**, and **Next.js API routes**, supporting authentication and core application data flows.
- Optimized backend data exchange and API performance, resulting in a **~5% improvement in data retrieval speed**.
- Implemented **OAuth-based authentication** and secure session handling, improving backend security and access control.

PROJECTS

Nomadsx | Full-Stack E-commerce site

[Live Site](#) | [Github](#)

Technologies used: JavaScript | React.js | Email.js | Redux.js | CSS3 | Python | SQLAlchemy | Flask.py | PostgreSQL | AWS

- Designed and implemented **RESTful APIs** in **Flask** for users, products, orders, reviews via **SQLAlchemy + PostgreSQL**.
- Implemented secure authentication and session handling via **Bcrypt**, **CSRF** protection, and role-based access controls.
- Optimized data access patterns and schema design to support **scalability and migration readiness**.
- Built backend order **processing and transactional workflows**, including address validation and email notifications.
- Incorporated an email confirmation method using **Email.js**, allowing users to get a confirmation email upon placing orders.
- Transitioned the validated system to **Shopify** as a managed commerce **backend**.

EDUCATION

Northern Virginia Community College

Woodbridge, VA

Information Technology Associate's Degree

January 2022 – June 2023

Relevant coursework: Data Structures/Algorithms, **Python**, Software Design, Software Development, and Database Management.

App Academy

San Francisco, CA

Certification of Software Engineer Immersive Program

July 2023 – August 2024

Relevant coursework: Full Stack, Software Engineering, Software Development Cycle, Data Structures and Algorithms, **Scrum**

Methodology, Database management, OOP, **Python**, **JavaScript**, HTML, CSS, **REACTJS**, **JSON**, **REST API** and more.
